

## New Zealand endorsement explanations and required supporting documents

The below tables are to be used in conjunction with the Guideline: [Supporting documents for plant exports](#) which sets the minimum information required in each type of supporting document.

*Accredited properties* - Where in-field controls are required, farms and packhouses must be accredited properties for that commodity and market (unless there is an exemption). The exporter is to identify the farm and packhouse to the Authorised Officer (AO) who will record the accredited property numbers on the inspection record for verification by Assessment Services branch **Note:** Grapes and watermelons are often field packed and may not have a packhouse number.

*Fruit Fly Pest Free Area* - For Appendix 2 – pest free area (PFA) from fruit flies – PFA evidence is generally not required provided the AO has identified the product origin or you have determined it from another source. Note – where an outbreak has occurred within a PFA, evidence from the state department is required to ensure the fruit has been sourced from outside the suspension zone.
